It's Not a Home Until It's Planted

HORTICULTURAL SERVICE

For the beautification of your home grounds you are invited to consult our experienced staff of nurserymen who are at your service to give information regarding desirable plants, trees and shrubs, together with cost estimates.

If you are contemplating planting an orchard or only a few trees for your own use, we offer you the advantage of our experience of thirty years in this section, concerning best varieties and care of stock.

Our methods of digging and packing assure safe delivery of your order.
How To Order:
ORDER BLANK OPPOSITE INSIDE BACK COVER

Local Customers: You may order by telephone. Shopping from your home is facilitated by our telephone order department. It provides you with a quick and efficient method of placing your order which will receive the same careful and prompt attention by our experienced nurserymen and seedsmen as if you were present.

Mail Orders: Fill out order sheet carefully, sending in same as soon as convenient after receiving this catalog. Nursery Stock, Seeds and Bulbs should have the desired quantity written distinctly in the column provided for that purpose, with price after each item.

Packing and Shipment—We are especially equipped for packing Nursery Stock and Seeds for long distance shipping. We have had thirty years experience in handling goods of this class and pack to insure arrival at destination in good condition regardless of distance.

Freight—On Nursery Stock orders of $10.00 or more we prepay freight charges to any point within 50 miles of Seattle. On orders for less than $10.00 add enough to cover transportation.

Parcel Post. .Parcels weighing 8 oz. or less containing seeds, cuttings, bulbs, roots, scions and plants, 1 cent for each 2 oz. or fraction thereof, regardless of distance.

Other parcels of fourth class matter are chargeable according to distance zone as follows:

The limit of size of a package that will be accepted by parcel post is 84 inches in length and girth combined. Larger packages must be forwarded by express or freight.

TERMS—Cash with order. Send remittances by Money Order, Draft or Registered Letter.

We exercise the greatest care to furnish seeds, bulbs, plants, shrubs and trees that are pure and reliable, but owing to the various conditions of climate, soil and cultivation attending success, we do not warrant in any way, express or implied, the description, purity, productiveness or any other matter of any seeds, bulbs, plants, shrubs or trees sold by us, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on above terms, no sale is made thereof and the goods must be returned to us at once and the money will be refunded.

GENERAL INDEX IN BACK PART OF CATALOG!

Success In Transplanting

trees and shrubs has its foundation in the care given them in the nursery. Our stock is transplanted often to insure a fibrous root system close to the plant.

All evergreens are carefully dug with a solid ball of soil which is wrapped with burlap and properly tied to prevent breaking. The rich soil in our nurseries is especially adapted to this method of handling, thus allowing the transplanting of our evergreens at any time with the utmost of safety.

Greatest Values Through Quantity Production!

IMPORTANT! Size alone does not indicate true value in Evergreens. We quote only first class plants developed through scientific handling, including frequent transplanting and trimming to become specimens in their class. This affords our customers additional value in luxuriance, symmetry, compactness, vitality, and safety in moving, unattainable in plants not thus handled.

THIS FALL SUPPLEMENT presents those things planted in the fall for best results, including dependable Fruit Trees, Shade Trees, Deciduous Flowering Shrubs, Roses, and Bulbs, at new attractively low prices.

Our Georgetown Nursery on the north boundary of the new airport is conveniently accessible over newly paved Ellis Avenue. Our large stock there is augmented with the produce of our newly established nursery near Kent. The final clearance of our old Duwamish Avenue Nursery for the new airport is reflected in exceptional values at Ellis Avenue as well as at our downtown nursery store illustrated on the page opposite. Mail orders receive careful attention.

We highly appreciate the increasing trade with which we have been favored, and aim to so serve that we may merit the continued confidence of a discriminating patronage cognizant of the true economy of reliable horticultural products.

Generally the first summer spraying of fruit trees is effective as a dormant spray to eliminate all pests. Lime and sulphur is especially useful in this process.

To look after the shape of the tops, selecting such well-shaped tree. Of course, this cannot all be done at one time. It is necessary each year to look after the shape of the tops, selecting such branches as are most desirable for the building of the tree; then cutting off the surplus. This applies especially to fruit trees. For apple trees, according to the pest to be eliminated. See spraying table in General Catalogue, page 128.

**CULTURAL DIRECTIONS**

**Malmo's Selected Nursery Stock**

**WHEN AND HOW TO PLANT**

Special attention is called to the superior quality of Nursery stock which we supply. Our experience in growing and transplanting nursery stock in the Puget Sound climate covers over thirty years. This climate is particularly well adapted to a wide range of varieties of nursery stock that heretofore have been successfully grown only in certain parts of Europe. The varieties range from the hardiest to semi-tropical plants. Evergreens thrive especially well in our climate, obtaining better growth and color than in any other part of the world.

Evergreens may be successfully transplanted the year round providing sufficient water is used, but the best time to transplant is early in the fall or late in the spring. Ornamental deciduous trees and shrubs and all kinds of fruit trees and berry bushes may be set out any time after the rainy season commences (generally some time in November) until the first of April. The early planting, however, is much preferable as it gives the trees and plants a chance to establish a new root system before the dry season commences. Plants or trees of any size may be transplanted successfully providing they have been properly cared for in the Nursery. Our stock is transplanted every two or three years, thereby producing a root system on the Evergreens that will hold firmly to a ball of soil, and a mass of fibre roots on the deciduous trees, insuring full success in transplanting.

We make a specialty of large size fruit trees in varieties best adapted to this climate. These are transplanted every year in our nursery to insure a perfect root system and can be set out by the planter as safely as smaller trees. Many of these trees are highly ornamental, producing fruit as well as beautifying the home. Our stock is large and complete. We invite requests for estimates on planting of orchards.

**ORCHARD AND GARDEN**

The State of Washington ranks among the first in fruit production. With proper care given to varieties suitable for Western Washington, fruit may be as profitably grown in the Puget Sound section as in the celebrated fruit districts of Eastern Washington.

The Puget Sound climate is adapted to the growing of both sweet and sour cherries, pears and many varieties of apples, including Yellow Transparent and Gravenstein. Western Washington is unexcelled in its production of prunes and plums.

Where one has not sufficient space for an orchard, a few fruit trees in the garden or back yard may be made to yield a high return for the space occupied. Such planting need not exclude the vegetable garden, which may be planted between the trees, and the soil made, with the addition of proper fertilizers, to accomplish double duty production.

The first requisite for the successful growing of trees is proper preparation of the soil. The ground should be plowed or spaded very deeply and thoroughly as the roots will soon gather food from the whole orchard area.

**PLANTING**

Trees should be heeled in only in a cool shady place. If the trees have, for any reason, before planting, become dried out, they should be buried, tops and all, in a trench which should be filled with water every day for three or four days, or at least soaked in water for a few hours, until the bark is restored to a healthy, plump condition.

The holes should be staked out and dug before exposing the trees. The roots must be protected carefully from the sun and drying winds, as either will very soon wither up the fibrous roots which are necessary for quick and vigorous growth. The holes should be dug from six to twelve inches larger around than the roots of the trees, to allow for filling in a few inches of loose soil, on top of which the tree should be planted to a depth it formerly stood in the nursery row.

**PRUNING**

The first object is to establish a balance between the top and the roots, cutting off all bruised and broken branches. The second is to shape the top so as to make a good foundation for a well-shaped tree. Of course, this cannot all be done at one time. It is necessary each year to look after the shape of the tops, selecting such branches as are most desirable for the building of the tree; then cutting off the surplus. This applies especially to fruit trees. For apple trees, it is the general rule to cut back each year one-half of the previous season's growth. Shade trees and other ornamental stock, including shrubs and evergreens, are pruned only for desired shape.

The best time for pruning fruit trees, in the Puget Sound country, is the month of January, and not later than the end of February. On the east side of the Cascades, it may be done one month later. All winter pruning and spraying should be done at the time the trees are dormant.

**SPRAYING**

The spraying of fruit trees has proven to be an absolute necessity. Lime and sulphur is effective as a dormant spray to eliminate all pests. Generally the first summer spraying of fruit trees is applied by the time the blossoms are dropping, being followed by a second and third spraying, according to the pest to be eliminated. See spraying table in General Catalogue, page 128.

METHODS OF PLANTING

There are two methods of planting, commonly followed throughout the Fruit Belt, namely, the "Square" method, and the "Hexagonal" or "Triangular" method. Each has its respective merits, and the illustrations given above will explain themselves. Figure 1 sets for the "Square" method, and Figure 2 the "Hexagonal." In each figure the trees are thirty feet apart each way. In the "Square" method of planting, the rows are thirty feet apart in each direction, while in the "Triangular" method, the rows in one direction are twenty-seven and one-half feet apart, thus allowing a few more trees to be planted to the acre.

The so-called summer apples are the earliest of all apples and can be used for cooking before fully ripe, but are not desirable for shipping as they have no keeping qualities. The so-called fall apples will ripen two to four weeks later than the first named and are of better keeping qualities, and may be stored as late as New Year.

Summer and Fall Varieties

RED ASTRACHAN. Large, deep crimson, very hardy.
YELLOW TRANSPARENT. Golden yellow, highly flavored. The standard summer apple, and most excellent for cooking, even before fully ripe, but not suitable for long keeping. No apple approaches this variety in quality at that time of the year. It is one of the best varieties grown to perfection in orchards on the west side of the Cascade Mountains, and is ready for use long before other apples can be shipped in.
DUCHESS OF OLDENBURG. Large, hardy, red streaked on yellow ground flesh tender and juicy; a delightful flavor.
FAMEUSE (SNOW). Deep crimson streaked on yellow ground flesh white, well flavored.
GRAVENSTEIN. Large, hardy, distinctly streaked red on deep yellow ground of excellent rich flavor and good shipper, will keep until early May. It is one of the choicest varieties for planting in localities on the West coast, and especially adapted to the west side of the Cascade Mountains.
RED GRAVENSTEIN (NEW). Sometimes called Winterstein or Winter Gravenstein. Same excellent quality as the Gravenstein, with the exception of color, which is red, and that it ripens about two or three weeks later, and is a longer keeper.
WAXEN. Fruit rich yellow, juicy and tender.
WEALTHY. Large, yellow shaded deep red; flesh white, tender and of excellent flavor.
YELLOW BELLFLOWER. Well-known, of rich yellow color, sometimes blushed on the sunny side. Excellent flavor and good keeper.

Winter Varieties

Winter apples are the long keeping varieties, some of them keeping as long as to the month of April.
DELICIOUS. Clear red on deep yellow ground. One of the sweetest and most highly flavored; handsomest apples produced. Although classed as a winter apple, it will not keep in long condition past New Year. Very hardy, vigorous, and productive, an early bearer and well adapted to the climate on the west side of the Cascade Mountains.
GRIMES GOLDEN. Deep golden yellow, of excellent quality, but not a very good keeper.
JOHNATHAN. Hardy, medium size, bright red, of most excellent quality as an eating apple, and attains its highest flavor about December and January, not quite safe for late keeping. The Jonathan is possibly the best known apple and adapted to all climates. Grown in quantity in the State of Washington for export.

Crab Apples

Prices same as Other Apples

Crab Apples are very hardy, and vigorous growers, yet the limbs are fine and often pendulous. They produce large clusters of blossoms and highly colored fruit, making them very ornamental. They usually ripen from the latter part of August until the first of October, and are very desirable for cooking, in the making of jellies and general culinary purposes.

FLORENCE. Large red, excellent for early market, ripening in August.
HYSSOP. Large, dark crimson, flesh firm and rich yellow. One of the most desirable, ripening September to October.
RED SIBERIAN. Fruit small, round, bright red, very tart, highly flavored. An excellent variety.
TRANSCENDENT. Fruit large, blushed red on brownish yellow ground; juicy and crisp. Matures September.

Yellow Transparent

KING (OF TOMKINS CO.). Shaded red on yellow ground. One of the best known apples and adapted to the climate of Puget Sound. Hardy, vigorous grower, good flavor and good keeping qualities up to Christmas.
MAMMOTH BLACK TWIG. Large red, good quality, late bearer.
NORTHERN SPY. Hardy, large round, greenish-brown striped red. Rich aromatic flavor. Good winter keeper, and late bearer.
R. I. GREENING. Large, roundish green, rich aromatic flavor when ripe; excellent late keeper. Hardy fit for use until late in winter or spring.
ROME BEAUTY. Large, round slightly conical, bright red on yellow ground; flesh tender and juicy. Ripens in early winter.
SPITZENBURG. Large handsome rich red, excellent flavor, but shy bearer.
STAYMAN WINESAP. Hardy, bright red, large size. Larger and more adapted to the different localities and soil than the ordinary Winesap. Of the same excellent quality but the color not as deep red.
WAGENER. Deep red; flesh firm, sub-acid. Early and continuous bearer.
WINESAP. Medium size, dark red, juicy, sweet, and highly flavored. A good late keeping winter apple.
WINTER BANANA. Fruit medium to large, smooth and handsome, golden-yellow, shaded with red blush. Excellent aromatic flavor. Tree large, healthy and vigorous grower.
YELLOW NEWTOWN. Hardy, color clear light yellow, sometimes shaded pink blush. Of the most excellent quality and flavor when in ripe condition, in storage February to May. Well adapted to the climate of the Pacific Coast.
Cherries, both sweet and sour, are well adapted to the climate and conditions on the Pacific slope. They are profitably grown in orchards in the Puget Sound region. Excellent for a family back yard, both for fruit and shade. They are very ornamental, being of strong, robust growth and practically free from disease and insect pests.

Cherries delight in a rich, well-drained loam, but do well in sandy soil when properly fertilized, provided, however, they are well watered the first season and continuously cultivated.

**Prices:**

- **One year or light two year old**
  - 6 to 8 feet, extra heavy (sweet cherries only)
    - Ea. $1.25; 10 for $12.00; 100 for $100.00
  - 4 to 6 feet:
    - Ea. $1.00; 10 for $9.50; 100 for $90.00
    - Lighter grade:
      - Ea. .90; 10 for $8.50; 100 for $75.00

- **Extra large specimen bearing size trees**
  - Each $2.50 to $3.50

**Sweet Cherries**

- **BING.** One of the most delicious sweet cherries; color dark red nearly black; meat solid, sweet, and well flavored. A great improvement on the Black Republican from which it originated. Crop ripens evenly and is excellent for shipping.
- **BLACK REPUBLICAN.** An old variety now chiefly used for pollination.
- **BLACK TARTARIAN.** Very early, medium size, good flavor. Also used as a pollinator.
- **LAMBERT.** This is identical with the Bing except that it is about two or three weeks later. Color dark, deep, cherry red. Excellent for canning and shipping.
- **ROYAL ANN.** Large, light red on yellow ground. Of excellent flavor which differs a great deal from the Bing and Lambert. Well adapted for canning purposes.
- **WATERHOUSE (Long Stem).** Fruit small, light red. One of the best pollenizers.

**Sour Cherries**

- **EARLY RICHMOND (Kentish).** Very early; medium size; well flavored.
- **EARLY MORELLO.** Color nearly black; size medium to large with well flavored dark purplish, juicy meat.
- **LATE DUKE.** Very large, bright red. When well ripened this variety is highly flavored and not very sour. It is an excellent cooking cherry, and also very good for eating.
- **MAY DUKE.** Early, fine flavored, of medium size. Very much like the Late Duke but about two weeks earlier.
- **MONTMORENCY.** Color brightest red. The most popular sour cherry grown; especially adapted for canning purposes on account of its brilliant color and good flavor. A very early bearer and good shipper.

**Bearings Size Fruit Trees**

We specialize in the production of large, bearing-size fruit trees, to meet the ever increasing demand from the home orchardist who wishes to have fruit from one to three years earlier than by planting small trees. This stock has been properly transplanted to insure a good root system and properly trained each year through pruning.

All of these trees are strong and vigorous, and can be strongly recommended. Prices are in accordance with size and development, which are the factors influencing early bearing, rather than age only.

For prices, see varieties!

**FERTILGRO** contains all the ingredients for maximum plant growth!
Mulberry
The mulberry is very valuable as a shade and ornamental tree, and the fruit that it produces makes it worthy of inclusion in every collection. It should be planted in deep sandy loam, requires very little pruning and attention. Selected 1 and 2 year old, $1.00.

RUSSIAN. Excellent shade and ornamental variety. Tree very hardy, a rapid grower. Fruit small.

TEAS WEEPING. See Weeping Trees.

Rose Culture
In the Puget Sound Region

On receipt of roses from our nursery, (1) If unable to plant at once unpack and "heel in" in a shady place, covering with soil half way up the stems and soak thoroughly. (2) Keep moist until planted.

Planting Roses. (1) Prepare ground thoroughly, breaking subsoil and mixing in well rotted manure, Garden Fertilgro or Bone Meal. Roses prefer a rich, sandy, clay loam. (2) Dig holes to a depth of two feet and large enough to accommodate roots when fully spread out. (3) Spread roots out on bottom of hole and bury crown (lowest branch at graft) about 2 inches below surface of soil—see Fig. No 1. (4) Plant deep enough to allow a shallow depression about plant to hold water. (5) Fill in dirt slowly, shaking plant slightly to sift about roots. (6) Firm soil well about plant. (7) Water thoroughly immediately pouring water in depression about plant allowing it to seep down and wash soil about roots. (8) Trim back to about 8 inches. See Fig. No. 2.

Culture After Planting. (1) Water often and abundantly during growing season. To prevent mildew roses should be watered only in the morning and not in the evening. Never sprinkle in the heat of the day. (2) Cultivate often, keeping soil well loosened at all times. (3) After first year, in early spring before buds start, prune back at least one half the previous year's growth, including inside crowding branches, old and dead wood, etc., and mix about a handful of Garden Fertilgro or Bone Meal in the soil about the roots.

Preparation for Winter Months. (1) In the fall and especially when planted in the fall, hill up with a few shovels of earth to protect base of the plant from severe frosts. Remove in spring when buds begin to swell—see Fig No. 3. (East of the Cascade Mts. more earth should be packed about the plant to give additional protection from the more severe weather.)

See page 31
In our superb climate roses attain a perfection seldom equaled anywhere, but we cannot expect them to thrive unless properly planted and cared for. Therefore, to promote more successful rose growing, the following suggestions are offered:

Roses thrive best in a rich, sandy clay-loam but will do well in any good garden soil if properly fertilized, either with well decomposed cow manure or good commercial fertilizer. Roses are great feeders and should be fertilized every season.

On the Pacific Coast roses can be planted any time after they drop their leaves in the fall until late in the spring. Early planting, however, will bring the best results. Upon receiving roses for planting, especially if they appear dry, they should be uncovered at once and heeled-in in a shady place, covering them with soil half way up the stems. Use plenty of water to wash the soil among the plants.

In preparing for planting, dig or trench in good soil mixed with fertilizer to the depth of two feet. Set the plants deep enough to allow the soil to cover above the graft. Firm the soil down solid and water well to wash the soil in among the roots. Trim the bushes, thinning out the branches to three or four of the strongest, which should be cut back at least one-half of the last year’s growth. The trimming should be repeated each year in order to produce better flowers and longer stems.

To prevent mildew roses should be watered only in the morning and not in the evening. This is especially important if the nights are cool. Never sprinkle the roses in the heat of the day.

Our Roses are of the choicest, two and three year old full grown stock. We have over two hundred varieties of the most select—new introductions as well as old favorites.

cool. Never sprinkle the roses in the heat of the day. Keep the surface well cultivated around the plants, allowing no weeds to rob the rose of its food or sunlight. Fertilizer should be applied two or three times during the season unless the soil is exceptionally rich.

Malmo's Peonies

Between the magnificent Rhododendron and the lovely June Rose, comes the Peony. It is used in the same way and in conjunction with its two stately rivals, to continue a bold color display from May to July. While in close harmony with the other, the Peony is more lavish in its bloom and makes the most pretentious show; besides which it is harder than either and more easily cultivated. Modern culture has developed many superb varieties, with the most delicate tints as well as the most intense colors. Their cut blooms are very lasting, and in most cases are exquisitely scented.

Culture. Peonies are of easy culture being extremely hardy and abundantly repaying proper care. They should be planted early in the fall or winter in deep, rich, well-prepared soil, covering the buds but an inch or two. Do not expect too much of them the first year, as they are a little slow in establishing themselves. Ask for prices on quantity.

CHARLEMAGNE. Late. Large double flowers of lilac-white with salmon-pink center. Free flowering. Each 75c; Doz. $7.50.

CLAUDE DUBOIS. Midseason. Rich, clear, satiny-pink with a pronounced silvery sheen. Very large and double. Each $1.50; Doz. $15.00.

DORCHESTER. Very late. Color salmon-pink; habit upright. Each 50c; Doz. $5.00.

DUC DE WELLINGTON. Very late. Color salmon-pink; habit upright. Each 50c; Doz. $5.00.

DUCHESS D'ORLEANS. Midseason. Dark carmine pink with soft pink and salmon center. Vigorous grower. Fragrant. Each 50c; Doz. $5.00.

EDULIS SUPERBA. Very early. The Decoration Day Peony. A clear mauve-pink with silvery reflex. Fragrant. Each 50c; Doz. $5.00.

FELIX CROUSSE. Midseason. Large, compact flowers of a rich, even ruby-red having none of the purple or crimson shades. Exceptionally brilliant and effective. Each $1.00; Doz. $10.00.

FESTIVA MAXIMA. Early. The finest white peony. Good cut flower. Fragrant. Each 75c; Doz. $7.50.

GENERAL BERTRAND. Early pink, will bloom with Officinalis Rubra. Each 50c; Doz. $5.00.

GENERAL DODDS. Late. Very large globular flowers of an even shade of dark rose. Tall, strong grower and free bloomer. Very fine. Each 75c; Doz. $7.50.

LIVINGSTONE. See General Dodds.

MARIE LEMOINE. Very late. Color ivory-white with occasional narrow carmine tracings on the edge of some petals. The flowers are of enormous size often measuring eight to ten inches across. Each $1.00; Doz. $10.00.

MONSIEUR JULES ELIE. Early. Very full globular flowers of glossy lilac-pink shading to deeper rose at the base, the entire flower being overlaid with a silvery sheen. This immense blossom often measures eight or nine inches through. One of the finest cut flowers. Fragrant. Each $1.50; Doz. $15.00.

MLLE. LEONIE CALOT. Midseason. One of the most beautiful peonies, being a delicate rose-white with soft lilac-pink center; tall grower and exceedingly free bloomer. Each $1.50; Doz. $15.00.

OFFICINALIS RUBRA. Earliest dark red. Each 75c; Doz. $7.50.

QUEEN VICTORIA. Early. White, faint blush tint when in bud. Each 50c; Doz. $5.00.

Flowering Bulbs For Fall Planting

There are no flowers which will give more pleasure and satisfaction than the Winter and Spring Flowering Bulbs. Their culture is so simple and easily understood that anyone can have splendid success with them by exercising a little care and forethought. On the Pacific Coast most bulbs may be planted from October to February. Bulbs planted in October or November will give better results than if planted later. By planting early flowering bulbs, it is possible in our mild climate to have a continuation of flowers the year round.

Tulips

The climate on the Pacific Coast is ideal for the growing of Tulips. They may be left in the ground from year to year, otherwise the directions for culture are the same as for hyacinths, except that tulips cannot be grown in water.

EARLY SINGLE TULIPS

The following list is made up entirely of the best varieties, all of which are suitable for either forcing or bedding. We import only the highest grade first size bulbs which always give the best results. Malmo pays the postage.

- **COULEUR DE CARDINAL**: Velvety crimson, inside glittering scarlet. Especially adapted to late forcing or outdoor planting. Doz. 50c; 100 $4.50.
- **CRAMOISI BRILLIANT**: Bright vermilion of large size; makes beds of remarkable brilliance. Doz. 35c; 100 $2.50.
- **CULLINAN**: White, changing to delicate pink; extra large flower. Doz. 60c; 100 $4.50.
- **GENERAL DE WET**: Beautiful deep orange, shaded golden yellow at the base of the petals. Large, sweet-scented flower. One of the most beautiful early tulips. Recommended both for forcing and bedding. Doz. 1.25; 100 $9.00.
- **FRED MOORE**: Deep apricot shaded with orange; very early and beautiful; fine for forcing. Doz. 50c; 100 $3.50.
- **GOLD FINCH**: Long lasting pure yellow; sweet scented; forces well. Doz. 60c; 100 $4.50.
- **IBIS**: Clear, deep unfolding rose with white markings; long stems. Doz. 75c; 100 $5.50.
- **KEIZERSKROON**: Carmine-scarlet with broad yellow border. Probably the most popular Early Tulip. Enormous flower on tall, stiff stem. Excellent for forcing and bedding. Doz. 65c; 100 $5.00.
- **LA REINE**: White, flushed with rose edge; splendid for forcing. Doz. 35c; 100 $2.50.
- **LA REINE MAXIMA**: Same color as La Reine but much larger. Doz. 60c; 100 $4.50.
- **PINK BEAUTY**: Large vivid pink with white base starred yellow. Enormous superb flowers on long, stiff stems; fine late forcing. Doz. 1.25; 100 $9.00.
- **PRINCE OF AUSTRIA**: Large brilliant orange scarlet; long stems; fragrant. Doz. 50c; 100 $3.50.
- **ROSE LUISANTE**: Large, deep silky rose; adapted for borders of late forcing. Doz. 50c; 100 $3.50.
- **WHITE HAWK**: See Albion.
- **MALMO'S EARLY MIXED**: For pot culture, beds or borders. Doz. 50c; 100 $3.50.

Your Lawn will produce more luxuriant growth with the application of Malmo’s Lawn Fertil-gro fertilizer. See page 47.
Tulip Species or Rock Garden Tulips

These are one of the newer families of Tulips and the best for use in Rockery or Rock Gardens. They are very beautiful, and being low growing are especially fitted for this work. We have added this line of Tulips to our list knowing that every lover of Rock Gardens has felt their need. The following list, you will find, contains the best varieties.

AUSTRALIS. Height 8". Yellow outside, shaded red. Native of Spain. Each 15c; Doz. $1.50.

Crocus

This is the earliest bulb to blossom in spring. Although most showy when massed in large beds, or when planted in lines of distinct colors, a very desirable effect is produced by setting Crocus here and there over the lawn. Crocus will care for themselves, blooming very early amid the grass and dying down to the bulb in ample time to be entirely out of the way of the lawn mower. The Crocus should be planted in the autumn, in any good garden soil, about three inches deep and about two inches apart, if in beds or borders.

**ALBION**. Fine purple variety. Good for planting in lawns. Doz. 45c; 100 $3.00; 1000 $25.00.

**BARON BRUNOW**. Blue-mauve, large. Doz. 45c; 100 $3.00; 1000 $25.00.

**CAESEAR**. Huge purple flower: appears well as a garden border. Doz. 45c; 100 $3.00; 1000 $25.00.

**KING OF THE WHITES**. Pure white; very large handsome. Doz. 45c; 100 $3.00; 1000 $25.00.

**LOTHAIR**. Lilac striped with purple, very dainty. Doz. 45c; 100 $3.00; 1000 $25.00.

**MAMMOTH YELLOW**. First size, Doz. 45c; 100 $3.00; 1000 $25.00. Second size, Doz. 35c; 100 $2.00; 1000 $15.00.

**MIKADO**. Lilac deeply flushed with mauve stripes on inside. Very fine for planting with other colors. Doz. 45c; 100 $3.00; 1000 $25.00.

**PALLAS**. Blue with white stripes; large flowers, which produce lovely effects in rock gardens. Doz. 45c; 100 $3.00; 1000 $25.00.

**SELECTED PIPS**. For forcing indoors or planting outside. Doz. 45c; 100 $3.00.

**SELECTED CLUMPS**. For outdoor growing. Ea. 50c.

Lily of the Valley

One of the most charming spring flowering plants, producing in profusion its delicate bell-shaped, delightfully fragrant white flowers. They thrive best in a rich sandy soil and a shady situation — are perfectly hardy and can be left undisturbed in the open ground, where they will increase from year to year, and are very attractive in beds or borders. For outdoor planting and winter forcing pips are ready December to March.

**SELECTED PIPS**. For forcing indoors or planting outside. Doz. 75c; 100 $5.50.

**SELECTED CLUMPS**. For outdoor growing. Ea. 30c.

Poeticus and Poetaz Narcissus

The Poeticus Narcissus are probably the best known of the short trumpet or cup class. They have only one flower on a stem, but are very hardy and multiply rapidly in the ground. They also force well. The blossoms of the Poetaz class are somewhat similar to the Poeticus and borne in clusters of three to eight flowers on the stem.

Customers at a distance will find it convenient to order by mail. Malmo pays the postage.

Mammoth Single Hyacinths

Single Hyacinths are more desirable than the double. They are better for forcing, more vigorous in growth and are more beautiful than those of the double sorts. Customers at a distance will find it convenient to order bulbs by mail. MALMO PAYS THE POSTAGE.

OUTDOOR CULTURE. The bulbs may be planted any time from October to February. They succeed in any good, well drained garden soil. Dig deep and mix in a little fertilizer. Set the bulbs so that the tops will be between two and three inches below the surface and six to ten inches apart, with a little sand under and above them if it is convenient, being careful that none of the fertilizer comes in direct contact with the bulbs. Early planting brings the best results.

POT CULTURE IN THE HOUSE. Plant from September to December in rich, sandy loam, inserting the bulb (base downward) so that the top is just above the surface. Do not pack the soil in the pots, as the bulbs will be much less liable to push out when the root growth commences if the soil is not packed. Water thoroughly and set the pots away in a cool, dark place for three weeks. This will allow the roots to grow and become firmly fixed in the soil. The plants can then be brought into the light and will at once commence the top growth. Keep near the light, and at a temperature of 50 to 70 degrees. Water frequently.

WATER CULTURE. Fill the glass with water until the base of the bulb rests on the water. Set the pots away in the dark for three weeks. Fill up the glass with water as fast as it evaporates. If the water becomes impure it should be changed and the roots well cleaned before putting in again. A small piece of charcoal put in the glass will keep the water pure much longer. Give as much fresh air as possible without a direct draught, plenty of light and keep the glasses full of water. If moved out of the direct rays of the sun, flowers will last longer.

CULTURE—The water garden, whether a formal concrete pool or just a tub in the corner of the garden, is a source of continual interest and beauty, and requires, perhaps, less effort for the result than anything else in the garden. The essentials are as near as possible one foot of rich garden loam and one foot of water.

—Adapted to small pools.
—Adapted to medium sized pools.

CONQUEROR. Immense floating dark red blooms streaked with white on the outer petals. Nine inches across; heavy leaves 12 to 14 inches. One plant will carry as many as 15 buds and blooms at one time. A strong grower requiring an eight-foot space. Each $5.00.

ESCARBOUCLE. Large, brilliant, red floating blossoms; strong grower requiring an 8 ft. space. This lily attracted more attention than any other last summer on account of its brilliant coloring. Each $7.50.

EUGENIE DE LAND† (See photo No. 3) Pink floating flowers 5 to 6 inches across. A strong grower. Each $2.00.

HELEN FOWLER† (See photo No. 2) A light pink bloom borne about 3 inches above the surface of the water; not as desirable as other varieties. Each $1.00.

JAMES BRYDON† Floating cup shaped flowers, dark rich, reddish rose. A splendid bloomer of beautiful color. Foliage of this variety a bronze red. Each $3.00.

MARLIAC ROSEA† (See photo No. 1) Very large light pink, floating flowers. A free bloomer and one of the most popular varieties. Each $2.00.

MARLIAC WHITE (ALBIDA)† (See photo No. 4) Floating large pure white flowers. A good bloomer. Each 75c; Doz. $8.00.

MARLIAC YELLOW (CHROMATELLA)† (See photo No. 5) Floating large bright canary yellow flowers. Foliage deep green mottled brown. Each $2.00.

PYGMAEA HELVOLA* A miniature gem for tub culture. The canary yellow flowers are one to two inches across, and are profusely borne. Each 75c.

ROSE AREY* One of the most beautiful bright pink lilies. Very fragrant floating blooms from 6 to 8 inches across; borne in succession all summer. One of the most admired pinks and one which we strongly recommend. Ea. $3.00.

SIOUX* Floating flowers of deep apricot, rose in center. Outer petals slightly flushed with rose. Very attractive and especially good used with Marliac Yellow. Each $2.50.

W. B. SHAW. Flowers large, of rich rose-pink and very fragrant. A strong grower and continuous bloomer of N. Odorata type. Each 75c; Doz. $8.00.

BULB BOWLS

FERTILIZER PAYS BIG DIVIDENDS—See pages 46 and 47
Japanese Lilies

Lilies planted outdoors during the fall or early spring flower each year from June to October. After bulbs are set out they should remain undisturbed for five or six years. They will increase in size, beauty and number of flowers; our Coast climate being perfectly suited to their requirements. They may be planted in open ground or beds and are very effective when planted in a border either alone or among perennials or shrubbery. Malmo pays the postage.

Malmo's Lawn Grass Seeds

HOW TO MAKE A HANDSOME VELVET LAWN

The best time to make a lawn, we consider, is either in late summer or spring.

Spade the soil deep and cultivate well. If the soil is sour use hydrated lime, about 100 pounds to 1000 sq. ft., applying it preferably two to four weeks before seeding. Commercial fertilizer should be scattered on evenly and well raked in just before the seed is sown. In sowing the seed be careful to spread it evenly. The best method is to take half of the seed and sow it walking across the lawn, then take the other half and sow it walking lengthways. After the seed is on do not rake, but roll it in. If a roller is not available, tamp the seed into the ground with the back of the shovel. Sprinkle lightly, being careful not to float the seed.

While the seed is germinating and the grass is young extra care should be used, especially during dry weather, that the ground be kept moist. It should never be allowed to dry out but cannot be soaked, so it is necessary to watch it very closely and sprinkle whenever necessary, sometimes as often as three times a day.

Commence cutting as soon as the grass is long enough, and cut often. This will both thicken the grass and make it finer. If cut often the clippings may be left on the ground for fertilizer. They will not be noticeable unless the grass is allowed to grow too long between cuttings.

After the lawn is established it should be thoroughly soaked about once a week during the dry weather. When watering, saturate the ground thoroughly and it will not be necessary to do it so often.

WASHELLI LAWN GRASS

This is the grass that is used exclusively at Washelli Cemetery and has produced all of their beautiful lawns. It is the best mixture of grasses for the purpose of quickly producing a fine, lasting lawn. Each variety of grass is there for a special purpose and nothing but the very highest grade of clean seed is used. It makes a rich, velvety, dark green turf that, when properly cared for, improves with age and stands almost any amount of wear. It starts quickly and makes a good lawn the first season. Sow 1 lb. to every 150 square feet.

MALMO'S WASHELLI LAWN GRASS (Subject to market change. Postage extra)........1 lb. 65c; 10 lbs. $6.25; 100 lbs. $60.00.

MALMO'S EVERGREEN LAWN GRASS

A special blend of deep rooted, fast growing, turf forming grasses, somewhat coarser than Washelli. It starts quickly and grows well, even on poor soil and for those who want a quick permanent lawn at a minimum price this is the best. Sow 1 lb. to every 150 square feet.

MALMO'S EVERGREEN LAWN GRASS (Subject to market change. Postage extra)........1 lb. 35c; 10 lbs. $3.45; 100 lbs. $34.00.

MALMO'S SHADY LAWN GRASS

It is usually quite hard to obtain a good lawn under trees or in other shady places. This grass, however, will grow well and make a thick green turf in places where ordinary grass will not thrive for want of light. Sow 1 lb. to every 150 square feet. Ground that is densely shaded is very apt to be "sour" and as a rule the best results are obtained when an application of Hydrated Lime of about 100 lbs. to 1000 square feet is made before seeding.

MALMO'S SHADY LAWN GRASS (Subject to market change. Postage extra)........1 lb. $1.00; 10 lbs. $9.50; 100 lbs. $90.00.
MALMO'S GOLF LINKS MIXTURE

This mixture is composed of Creeping Bent and other high grade, fine-bladed grasses best adapted to withstand the frequent close cutting and hard usage required for the Fairways. White Clover not being suitable for this purpose is not included in the mixture. It is of the greatest importance that only such grasses as will fulfill all requirements are used and by a careful study of this subject we are able to offer a superior mixture for golf grounds.

MALMO'S GOLF LINKS MIXTURE (Subject to market change. Postage extra) 1 lb. 65c; 10 lbs. $8.25; 100 lbs. $60.00.

MALMO'S SPECIAL PUTTING GREEN MIXTURE

By close observation we have found the Bent Grasses to be particularly well adapted for use in establishing the Putting Green, owing to the smooth, thick, turf they form which withstands the constant close cutting and trampling. This mixture of Seaside Bent and various other Bent Grasses, is made up of seeds of the highest grade only. Subject to market change.

MALMO'S SPECIAL PUTTING GREEN MIXTURE (Ask for price on large quantity.; postage extra) 1 lb. $1.00; 10 lbs. $9.50; 100 lbs. $90.00.

MALMO'S BENT GRASS MIXTURE FOR VELVETY LAWNS

This mixture is a blend of the best imported Creeping Bent and other fine, acid loving grasses, which produce lawns of a beautiful velvety green color, unsurpassed for fine homes, and especially adapted to climate and conditions prevailing around Puget Sound.

It is a mixture, which if used with Malmo's Acid Fertilizer will build a lasting turf free from weeds. MALMO'S BENT GRASS MIXTURE 1 lb. $1.25; 10 lbs. $11.50.

Malm's Commercial Fertilizers

Prices are f. o. b. Seattle docks, railroads, or delivered in the city on regular delivery routes, and are subject to market changes without notice. (Ask for prices in quantity.)

An allowance of 25c per sack of 100 lbs. or 50 lbs. may be deducted for call at store, yard or nursery. Less than 50 lbs. are at call prices. Ask for quantity price.

HIGH GRADE FISH FERTILIZER

A high quality ground and dried fish fertilizer for quick results in the growing of roses, or the making of lawns or other uses where production of luxuriant foliage is desired.

FOR ROSES: One small handful for one treatment well mixed in soil.

FOR OLD LAWNS: 100 lbs. to 1,500 square feet. Apply broadcast and rake in well before sowing seed.

FOR OLD LAWNS: 100 lbs. to 3,000 square feet. Spread evenly, through a screen, if possible. Pulverize all lumps. Wet down with a coarse spray.

50 lbs. $2.50; 100 lbs. $4.50. Ask for quantity price.

MALMO'S ACID FERTILIZER

This is a well balanced mixture of acid fertilizers, especially prepared for the use of Creeping Bent and other acid tolerant grasses and should never be used on Washelli, Evergreen, or Blue grasses, which will not tolerate acid, but delight in a lime soil. This fertilizer is made up of ingredients which tend to sour the soil and eradicate weeds in the lawn. If applied every spring and fall to Creeping Bent lawns, there will be no trouble with weeds, such as dandelions, plantain, etc. Should be applied at the rate of 20 lbs. per 1000 sq. ft., and watered-in thoroughly.

1 lb. 15c; 10 lbs. $1.25; 50 lbs. $6.00; 100 lbs. $11.50.
**MALMO'S FERTIL-GRO**

Two complete, scientifically prepared, purely organic compounds especially adapted for uses listed below!

**Lawn Fertil-gro**
Reg. U. S. Patent Office

This fertilizer is a great foliage builder, designed to release its quickly available high nitrogen content only as fast as it can be assimilated by the plant without danger of over stimulation. When used on new lawns it should be applied broadcast and raked thoroughly in before sewing the seed at the rate of 100 lbs. per 1500 sq. feet. For old lawns it is better to give them an even top dressing, seeing that all lunation is high submerged. It should be wet down as soon as applied. This requires 100 lbs. to 2500 square feet.

- 5 lbs. 35c; 10 lbs. 60c; 20 lbs. $1.10; 50 lbs. $2.50; 100 lbs. $4.50.

**GARDEN FERTIL-GRO**

The Scientific Fertilizer

This is especially adapted for roses, fruits, berries and in fact all vegetables and flowers. It is scientifically prepared to promote rapid growth and maximum crop. It yields the plant nutrition which it contains only as the plants require it and is therefore lasting and effective.

- 5 lbs. 25c; 10 lbs. 45c; 20 lbs. 85c; 50 lbs. $2.00; 100 lbs. $3.50.

**PURE ANIMAL BONE MEAL (Raw)**

A white meal made from fresh animal bone. Valuable as a fertilizer where a large amount of phosphoric acid is required, combining also the advantage of a nitrogen content. It releases plant food continually through slow decomposition, making it desirable for use in rose beds and other permanent plantings.

- 5 lbs. 30c; 10 lbs. 50c; 20 lbs. 90c; 50 lbs. $2.25; 100 lbs. $3.75. Ask for quantity price.

**BONE MEAL, STEAMED.**

A meal of lower analysis than above, 100 lbs. $3.25.

**HIGH-GRADE BLOOD AND BONE**

This is a Packing House product composed of waste meat and bone with blood added to bring up its nitrogen content to nearly double that of commercial tankage at a small additional cost. Nitrogen being the most essential plant food, this fertilizer will go much further than ordinary tankage commonly called “Blood and Bone.”

- 5 lbs. 35c; 10 lbs. 60c; 20 lbs. $1.00; 50 lbs. $2.50; 100 lbs. $4.50.

**TANKAGE—Commercial Blood and Bone**

Is composed of waste animal matter, yielding its plant food quickly when spread over the soil. It is, therefore, valuable for quick growing foliage crops. 500 to 1000 lbs. per acre.

- 50 lbs. $2.25; 100 lbs. $3.50.

**GYPSUM OR LAND PLASTER**

For sweetening soil, freeing plant food and supplying sulphur. 50 lbs. $1.00; 100 lbs. $1.75.

**GROUND LIME ROCK**

Used for sweetening the soil, but on account of slower action must be used in larger quantities than Hydrated Lime. One ton or more per acre required, according to extent of acidity of the soil. Indispensable to success in growing Alfalfa on the west side of the Cascade Mountains.

- 100 lb. sack $1.25.

**HYDRATED LIME**

Pure Hydrated Lime, best adapted for general use, including lawns. Its advantage over a high analysis making it possible for fertilizer to accomplish maximum results. This form is quick and efficient. An application will attain the same results as twice the quantity of Ground Lime Rock.

- 20 lbs. 50c; 50 lbs. $1.00; 100 lbs. $1.75.

**MURIATE OF POTASH**

This is a very strong, quick acting fertilizer and is the best form of Potash available for ground that is lacking in this element. It is placed in a bag and is generally used at the rate of about 1 bag to the acre.

- 5 lbs. 35c; 10 lbs. 60c; 20 lbs. $1.00; 50 lbs. $2.00; 100 lbs. $3.50; 1 sack (200 lbs.) $7.25.

**NITRATE OF SODA.**

Nitrate of Soda is entirely soluble, like salt and should be used frequently in light dressing for best results; 150 to 200 lbs. per acre.

- 10 lbs. 35c; 20 lbs. 65c; 50 lbs. $1.00; 100 lbs. $1.75; 500 lbs. $5.00; 1000 lbs. $8.00; per ton $15.00; per ton $25.00.

**SHEEP MANURE.**

The sheep manure we offer and recommend is kiln dried and finely ground, practically free from germinable seeds and moisture.

- 20 lbs. 50c; 50 lbs. $1.25; 100 lbs. $1.75; 500 lbs. $8.00; 1000 lbs. $15.00; per ton $25.00.

**SULPHATE OF AMMONIA**

Strong in nitrogen, about 28%. It is very good to stimulate quick growth, but is not a complete fertilizer. It valuable for its high percentage of nitrogen, but must be used very carefully or will burn vegetation.

- 1 lb. 15c; 4 lbs. 50c; 25 lbs. $2.25; 50 lbs. $4.25; 100 lbs. $7.75.

**SUPER-PHOSPHATE**

Super-Phosphate furnishes a quickly available supply of phosphoric acid and is especially desirable as a top dressing for grain and for vegetables from 100 to 500 lbs. per acre.

- 10 lbs. 30c; 20 lbs. 50c; 50 lbs. $1.10; 100 lbs. $1.75.

**SULPHUR AGRICULTURAL**

No plant can grow to maturity without the element of sulphur. It is especially prepared to make these elements available for the plants and to act upon other chemicals naturally in the soil and transforming them into plant food. Applications of 100 to 500 lbs. of Agricultural Sulphur per acre have, in many cases, doubled the yield.

- 5 lbs. 25c; 5 lbs. 45c; 10 lbs. 75c; 20 lbs. $1.25; 50 lbs. $2.75; 100 lbs. $5.00.

**MALMO’S WORM ERADICATING FERTILIZER.**

This is an efficient preparation for destroying earthworms in lawns, putting greens, etc., and an excellent fertilizer for fine grasses. Should be used at the rate of 1 lb. to every square yard and thoroughly watered in. Must never be applied when there is frost in the ground or during long dry spells, unless kept continually moist for at least two or three days.

- 1 lb. 15c; 5 lbs. 25c; 10 lbs. 75c; 50 lbs. $2.00; 100 lbs. $3.60.

**STIM-U-PLANT**

A concentrated fertilizer in tablet form, especially convenient for potted plants, window boxes, etc. May be used either in tablet form or dissolved in water.

- 30 tablets in pkg. 25c; 100 tablets in pkg. 75c.

**MULFORD CULTURES**

Pure tested cultures of nitrogen fixing bacteria, supplied in sealed bottles eliminating all possibility of outside contamination. Contains suitable strains of bacteria for crops listed and is ready for use. In ordering specify what crops will be included—a different culture being required for each of the groups listed below:

**For Small Seeds.**

Spencer Sweet Peas

Giant Waved Orchid Flowering

This group includes the largest and most beautifully formed Sweet Peas. The Spencers have very large waved flowers which are produced abundantly on long strong stems, making the blossoms most desirable for cutting. They attain their great perfection on the Pacific Coast where they are grown extensively for seed, furnishing the greater part of the supply for the entire country.

CULTURE. Sweet Peas require good soil and plenty of water. On Puget Sound they may be planted in October, for early Spring flowering. Most seasons they come through without any protection, but a few inches of straw placed on the row will insure sufficient protection against the frosts usually experienced here. Plant in the Spring as early as the ground can be worked.

The best method of planting is to dig a trench 12 to 18 inches deep. If the soil is not good, remove the poor soil and supply a good quality, using plenty of fertilizer, which should be well mixed with the soil, filling up the trench to within three or four inches of the top. On top of this mixture of soil and fertilizer, place about one inch of good mellow soil without any manure or fertilizer in it, on which to sow the seed. Cover the seed one-half to one inch with soil, a half inch being preferable. The trench should always be kept open an inch or two from the top in order that water used will lead to the plants. Sweet Peas require more moisture than most other plants, and whenever it is necessary to water them, soak them thoroughly. When the seeds are well up, thin them out and when grown to one or two inches, fill in some more soil around them.

When the Peas are in bloom they should, unless grown for seed, be cut every day. If this is done they will produce better blooms on longer stems and blossom profusely all through the season.

One ounce will plant a 10 to 15 foot row.

Malmo's Garden Fertil-gro fertilizer contains all the ingredients for maximum plant growth. Lawn Fertil-gro induces rapid growth to produce a velvety green lawn. See fertilizer section, pages 46, 47

You are cordially invited to inspect our nursery at any time. A staff of experienced nurserymen are at your service to give advice concerning planting requirements and cost estimates — all without obligation to you!

MALMO & Co., Seattle, Washington

Every MALMO grown evergreen is dug with a compact ball of rich soil which firmly holds the complete fibrous root system — developed through frequent transplantings in our nurseries.

This is one reason why MALMO grown ornamental evergreens are DEPENDABLE and are in demand throughout the state of Washington and along the coast for the landscaping of homes, public buildings and parks.

MALMO Evergreens add value and lasting beauty to your home!

HOW TO GET THERE

By Street Car
Take South Seattle Car (No. 6) southbound on Second Avenue. Get off at Warsaw Street and walk two blocks east.

By Auto
Drive south on Fourth Ave South between the depots, as indicated on above map, incline to the left and across railroad tracks into Georgetown. Turn right at bank opposite old brewery and drive three blocks to nursery on Ellis Avenue.
